

Smart Manufacturing

1

Manufacturing

Manufacturing as a Technological Process

3

Manual Production

All Manned Stations with Manual Operations

CHALLENGES

Productivity Decision
Skill Variety Fatigue Quality
Safety Traceability

5

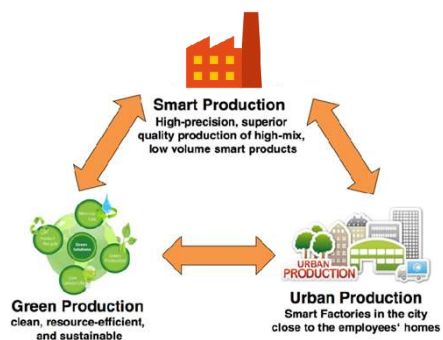

Industrial Revolutions

Produce More to meet Societies need in the defined **time** frame

6

Smart Manufacturing Smart, Green, and Urban Production

8

Smart Manufacturing

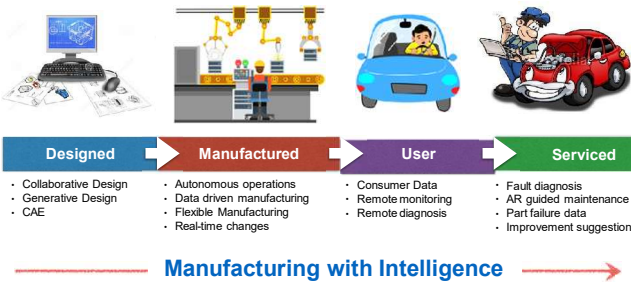

Ability to **evolve** and **grow** along with **challenging** needs of the organization

- Shifting customer demands
- Expansion into new markets
- Development of new products & services
- More predictive & responsive approach to operations and maintenance
- Incorporation of new processes / technologies
- Near real time changes to production

9

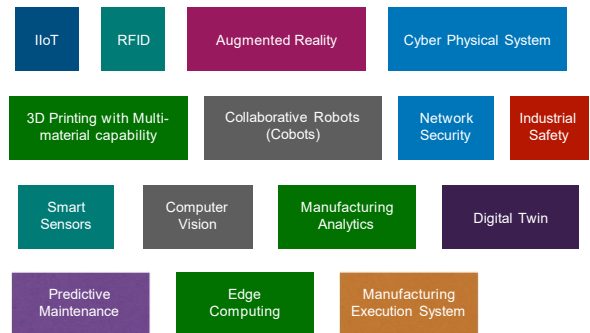

Smart Manufacturing

Smart manufacturing will **transform** how products are

13

13

Smart Manufacturing

Economic Potential

Ability to
Accelerate Corporate **Decision-making**
and **Adaptation** processes

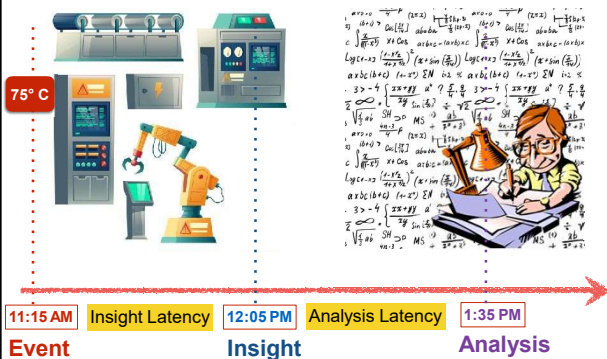

Agility

Ability to implement **changes**
in the company in **Real-time**

14

Adaptation

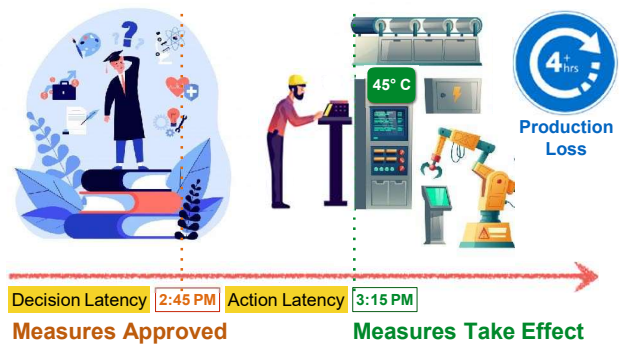

3:50

15

15

Adaptation

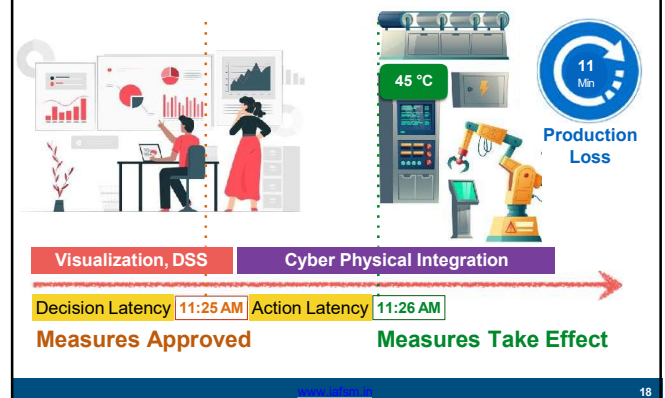

16

Adaptation

Smart Manufacturing

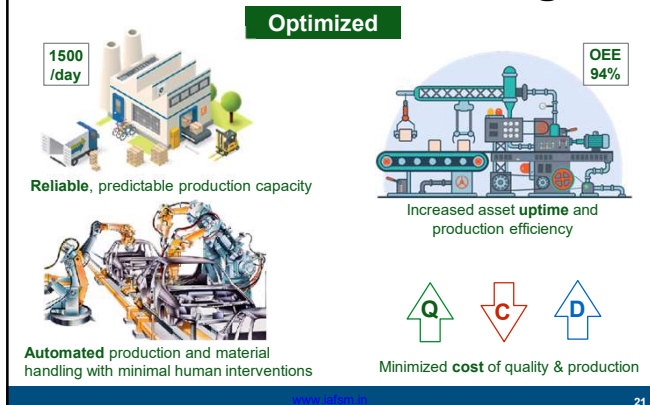

19

Smart Manufacturing

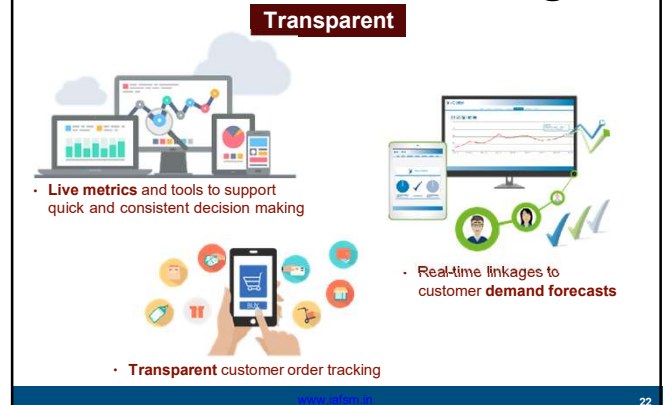

20

Smart Manufacturing

21

Smart Manufacturing

22

Smart Manufacturing

Proactive

- Predictive anomaly identification and resolution

- Automated restocking & replenishment

- Early identification of supplier quality issues

- Real-time safety monitoring

23

23

Smart Manufacturing

Agile

- Flexible and adaptable scheduling and changeovers

- Implementation of product changes to see impact in real time

- Configurable factory layouts and equipment

25

25

Challenges vs Technologies

Higher % Rejections

Lack of operations insight

Process variations

Extensive Rework

Low OEE

Unstructured information

Sub-optimal Process control

Long setup and production time

Unprecedented downtime

Un/Semi-skilled manpower

Machine Maintenance

Delayed Decision Making

Real Time Information

Data Visualisation

Data Analysis

Remote Maintenance

Smart Machine Interface

Augmented Reality

AI & Machine Learning

Additive Manufacturing

Collaborative Robots

Machine Vision

26

26

Smart Sensors

Need of smart sensors

By arming managers with **real-time information** about their **inventory**, **machinery**, and **purchased materials**,

Smart sensors create **visibility** across the supply chain and fuel **analytics** that can be used to understand and anticipate **demand**, **optimize sourcing**, and drive **high-value** manufacturing **decisions**.

27

27

Smart Sensors

Recent Developments

Analytics Tools

Extracting **insights** from sensor-created data is getting **easier** as **analytics** tools continue to improve.

Big Data

Handling and storing large, complex data sets is becoming more **manageable** through **Big data** platforms.

Real Time Processing

Tools enable **processing** and **analysis** of data on a **real-time** or a near-real-time basis, driving **timely decision making** and **action**.

New Algorithms

Algorithms continue to advance, expanding the **capability** to **predict** and **prescribe** courses of **action**.
